2021 and 2022 "Carry-up" Vehicles

Based upon the best information available to us at the time of publication, including intelligence forwarded to us by Mitchell International, we have "carried up" those vehicles believed to be unchanged from the previous Model Year. Although we are confident that the majority of these vehicles are unchanged, there could be an unexpected glass change since some of the manufacturer data was unavailable at press time. As always, it is up to the installer to determine that the replacement glass is the same as the original glass. If the glass appears different, you should verify the vehicle application with your local dealer.

****NOTE: 2018-22 Dodge Pickups are found under RAM**

NAGS® Adhesives Description, Definition and Prices

Description	Definition	Quantity	Price	
Urethane, Dam, Primer	An adhesive used to install stationary glass. Used increasingly in late model vehicles, this adhesive has become more important in retaining the structural integrity of vehicles involved in collisions, as glass has become an integral part of a vehicle's crash resistance.	As applicable	U.S. \$ \$28.00	CDN \$ \$32.00
Fast-cure Urethane, Dam, Primer	Any of a number of brands of urethanes or adhesives formulated to cure more quickly than standard, using either a chemical reaction or the original cure method of absorbing moisture from the atmosphere.	As applicable	U.S. \$ \$48.00	CDN \$ \$67.50
Non-Conductive Urethane, Dam, Primer	A Urethane adhesive that prevents the flow of electricity between the glass and metal of the body. Since all materials conduct electricity, the term Non-conductive is technically low-conductive. Some manufacturers mandate this urethane to prevent degradation of performance to electrical systems built into the glass such as Antennas, Global Positioning Systems, Cell Phones, etc.	As applicable	U.S. \$ \$90.00	CDN \$ \$127.00
High Modulus Urethane, Dam, Primer	An adhesive that provides extra strength to resist torsional twisting and helps maintain the structural integrity of the vehicle by enabling the windshield to stiffen the support of the vehicle body. This is a rigidity requirement mandated by some Vehicle Manufacturers.	As applicable	U.S. \$ \$90.00	CDN \$ \$127.00
High Modulus Non-Conductive Urethane, Dam, Primer	An adhesive that combines both the properties of the Non-Conductive and High Modulus as described above.	As applicable	U.S. \$ \$90.00	CDN \$ \$127.00
Foam Core Butyl Tape	Foam Core Butyl Tape is a non-structural sealant with a butyl surface over a compressible foam core used to seal mechanically fastened windows.	As applicable	U.S. \$ \$20.00	CDN \$ \$32.00

NAGS® Auto Glass Part Number System

The following information describes the format, content and codes used in the proprietary **NAGS Auto Glass Part Number System**. There are five sections in the format of the **NAGS Auto Glass Part Number**. The format and codes are developed and established exclusively by NAGS. Through its own editorial investigation and research, NAGS creates and assigns the part numbers to auto glass parts. NAGS publishes and distributes the part numbers under certain copyright and license restrictions.

TRADEMARK CODES

NAGS also assigns three-digit trademark codes to designate the manufacturer of the part. These codes are typically used for barcoding applications (in the barcoding positions 12 through 14) and are assigned at the request of the manufacturer. The use of these codes is at the discretion of the manufacturer. These codes are also used by NAGS to identify the manufacturer of the glass that was used on the original equipment, and to designate the source for part interchange information.
